Four Fine Examples of Hamilton Chapter Members Cars All  
Built in Hamilton

# Letter from the President

By: Peter Downey

Hello friends.

Here we are almost at the end of another driving season. Our cars were out to several cruise nights and cars shows this season,

which is always great to see. Thanks to Bob Barrick and the photos he has posted, we have some excellent visibility in the Studebaker community and in the Hamilton Niagara area as well.

It will soon be time to put our cars away for the winter and tend to the various projects we have. Personally, I need to deal with the starter (or should I say lack thereof) in my pickup this winter. It looks like an easy fix, or at least I hope so. The Cruiser needs the fuel gauge replaced, as it is always a guessing game just how much fuel it has in the tank, and I need to replace the gasket for the thermostat housing in the Champion. So, I will have a few projects to keep me occupied. Nothing major thankfully.

Our next big event will be our November Holiday dinner at King's Forest Golf & Country Club on the 30<sup>th</sup>. Stay tuned for details at our meeting on Oct. 19<sup>th</sup>,

At a recent Executive Meeting, we talked about planning for the 60<sup>th</sup> anniversary of the end Studebaker automobile production. We have some tentative ideas, centered around the Car show in Welland at Niagara College, along with some other potential events in Hamilton. We will for sure need some ideas and assistance in planning these, stay tuned for more information.

Keep the articles and photos coming for future newsletters. And any projects over the winter, we would like to read about

## Membership

Membership to the SDC is a requirement for membership in our chapter.

Currently, we have 69 memberships, 3 Honorary members. All of our memberships are

paid up. For membership only, it is \$15 in US funds. This is membership only and no magazine.

Applications for both our chapter and the Studebaker Drivers Club can be found at this link for both the SDC and Hamilton Chapter membership.

<https://www.thehamiltonchaptersdc.ca/Membership.htm>

Hamilton SDC membership link:  
[www.thehamiltonchaptersdc.ca](http://www.thehamiltonchaptersdc.ca)

### Hamilton Chapter SDC Membership Annual Dues: \$25.00 Jan.-Dec.

Membership in the HAMILTON CHAPTER is open to any person who supports the purpose of the Club and is a member in good standing of the National Studebaker Drivers Club. This membership includes six bi-monthly issues of the Bullet-Tin, the chapter newsletter.

Send completed application and your check payable to Hamilton SDC to our membership secretary at this address:

Sue Lusted 201 Livingston Ave. Grimsby On. L3M 4X2 Telephone: 905-945- 0027 Email: [hamiltonsdctreasurer@gmail.com](mailto:hamiltonsdctreasurer@gmail.com)

## 2025 Joint SDC/AOAI International Meet

**Washington, PA September 16-20**

Submitted by: Jim Bradley Hamilton SDC Member

Congratulations are in order for the Allegheny Region Chapter, SDC, and the Pennsylvania/Mid-America Penn-Ohio Chapter, AOAI. This year's International Meet was definitely done well. Weather for the week was perfect, and the Washington County Fairgrounds provided a spacious site for the event. The activities schedule included a number of interesting presentations, seminars, and area tours. A late count showed 491 registrations with close to 1000 participants, not including walk-ins. The field of judged and display vehicles was quite a sight. There were lots of familiar favorites on hand and a number of freshly restored vehicles making their

debut.

The Swap Meet had a very good turn-out of vendors with a wide selection of parts, accessories and Studebaker merchandise. There were several interesting display vehicles in the building, as well. The recently restored Muppet Movie car was there and it certainly got a lot of attention. The engineering of the driver controls in the trunk was impressive, but comfort of the operator obviously wasn't a concern.

Adjacent to the Fairgrounds is the Pennsylvania Trolley Museum, which is arguably one of the finest exhibitions of it's kind. SDC partnered with them during the meet, with the Wednesday "Meet and Greet Social" held there, and offered passes to visit the collection and enjoy unlimited trolley rides. This connection added another dimension to the event, and was very popular among the attendees. An interesting feature of the museum is that it now features an array of solar panels that provides sufficient power to operate the trolleys.

The AOAI also had a strong program throughout the meet. Dozens of Avanti vehicles were on display with examples from each of the generations. On display in the lobby of the host hotel were the #8 Factory Bonneville Avanti Test Car and the prototype Due Cento Avanti. The Due Cento is nearing completion of its restoration project. Owner, Richard Bennet provided a presentation about the car and its history on the salt flats.

It was interesting to see that the Allegheny Region Chapter, which had been in decline in recent years, has made an amazing comeback. Key to this success is the participation of younger members, some of whom are third generation Chapter members. Their energy, paired with the experience of the elder members, made the event work well. Of course, the real high-point of the meet was seeing old Studebaker friends, talking about great times shared over the years, and remembering those who have passed on. In my opinion, the only down side to this International Meet was the absence of our members from other countries. We certainly did miss our Canadian friends. Hopefully, conditions will improve soon.

The weatherman cooperated, lots of sun. Perfect dinner. We had a 1/2 pound dinner of Lake Erie perch with fries, a roll and a salad. Yummm. For those who didn't have fish there was a BBQ'D 1/2 chicken with fries, a roll and a salad. The food was great as usual. Somehow we were having so much fun, we forgot to take pictures in the big tent. We welcomed four guests also, one whose dad worked at the Hamilton plant and whose uncle was the paymaster.

## RODMASTERS CAR CLUB

### 2025 Fall Swap Meet & Car Show

Plan now to attend our annual Fall Swap Meet & Car Show at the Ancaster Fairgrounds. Hundreds of indoor and outdoor vendors with everything for the old car hobbist.

**Sunday, October 26**

Ancaster Fairgrounds & Marritt Hall, Ancaster Ontario. Junction of Highway 2/53 & Highway 52. From Highway 403, Copetown exit #55, south on Highway 52 for 2 km.

#### Swap Meet

Auto related items only. Indoor vendors in 2 large buildings. Vendor set up 6-7:30am.

#### Car Show

Be sure to attend the car show to see all the sweet rides of the 20's, 30's, 40's, 50's and so many more.

Spectator gates open at 8am. General admission \$10. Free parking on site. Outdoor vending spaces (10'x 20') \$25.

## Suggestions For Storing Your Studebaker

Compiled by Pete Yuen, B.C. Coastal Chapter -- Studebaker Drivers Club

- At this time of the year, many Studebakers will be going into storage as the club event activities wind down for the year. The following is a group effort for a list of suggestions provided by Graham Gagne , Roland Vardon, Brian Curtis and Ken Pleasance - . Each one quickly came to the 'rescue' after Pete Yuen sent out e-mail with subject title: "HELP" and a few lines asking for suggestion to better store the Studebaker until it is used again. Many Thanks to each and every one of the past editors mentioned for their quick response with suggestions to make up the following list:
- Wash and wax the entire car. Special care to chromed parts by polishing and waxing.
- Change the oil to get rid of acids and contaminates. Store vehicle with fresh oil. **Chose oil with high zinc content. Using modern oils with low zinc content will provide insufficient lubrication for engines with flat valve lifters as used by Studebaker. Recommended oil, "CAMOil" is available and sold by B.C. Southern Interior Chapter Members, Chuck Douglas\* and Brian Curtis.\***
- Add STP or equivalent to the oil and then take the car for a drive to warm. mix and circulate the oil. The STP or substitute will leave a nice oil film on all the moving parts to protect them over the storage period.
- Lift the car and block it up just so that the tires are not on the floor especially if there are bias ply tires on it so that they will not have a flat spot on them when the car is used again.
- When lifting the car for storage, block it up so that the wheels are not hanging on the suspension system
- Put a little extra pressure in the tires.
- Look for any holes or openings that mice can enter into the car. If any is found, plug them.
- Use mothballs or fabric softener sheet to deter mice from entering the car. Put them into the car, the engine compartment and the trunk. Some believe that Irish Spring Soap may repel mice.
- Keep the battery charged up. If it is on a trickle charger that is left on continually, make sure that it is one that will automatically cut out when the battery is fully charged. Overcharging the battery will occur if the charger is left on and it does not have an automatic shut off. A couple of times during the storage period if the battery is being charged, the water level should be checked and topped up if it is low.
- If for some reason that you do not wish to take the battery out of the car during storage, at least disconnect one of the cables.
- When a car is stored in a garage, be sure that it is vented and the door(s) be opened periodically to better circulate the air to reduce chance of condensation in the car.
- Plastic sheet or tarp should be put under the car if it is going to be parked on grass or gravel. This will prevent moisture from seeping under the car to rot out the floor and trunk panels and the frame. This will not happen if the car is left sitting on bare ground in just one season. Over a period of time, it will happen.
- Before storing it is wise to add a Stabilizer to the gas in the tank to keep it from going stale. Drive the car around for a while to ensure that it gets into the entire fuel system before shutting the motor off. Read the instructions on the Stabilizer to see how much is needed by ratio to the gas it is to stabilize.

- If often, there are significant temperature changes in the garage, it will create condensation in the gas tank. The more gas there is in the tank, the less it will condensate.
- If one can store a vehicle in a climate- controlled environment, it is essential to keep the temperature low as opposed to high. The heated garage should not be more than 60 degrees F, to keep moisture out but not enough to create problems.
- Drive the car into the garage instead of backing it in. This way, the exhaust will be facing the door.
- If you prefer to put a cover over the car, use a breathable type.
- Lubricate all hood, trunk and door hinges
- Do a lube job on the car. The grease will displace water if it got into the bearings or on bearing surfaces.
- Check to make sure that there is adequate antifreeze in the cooling system
- Change the brake fluid if more than 2 years old. Do not use brake fluid from a tin that is already open. Use from a fresh can as the fluid absorbs moisture from the atmosphere.
- Every couple weeks or so during the storage period, get into the car and pump the brakes to keep moisture from settling long enough cause rust pits in the master and wheel cylinders.
- Don't ignore the Hydrovac brake booster if your car has one. Use neatsfoot oil to keep the leather piston cup supple. Refer to 1959-1964 shop manual, pages 28 and 46 of Group 2 (II) for maintenance procedure. Clean the vent filter, item #3 on page 24, Group 2 (II)
- In times past, it was suggested that the engine be started and run about once a month. More recently, it has been found to be better not to start the engine as in most cases, it is not allowed to operate long enough to get everything warmed up and thus creates a bigger condensation problem than if the engine was not started at all.
- Chuck Douglas [doug108@telus.net](mailto:doug108@telus.net) \*
- Brian Curtis <briankcurtis22@yahoo.com>

## From the Desk of the Editor

**Susan Lusted**

- Our newsletter which I submit for the newsletter judging was recently awarded 100 % and placed first in judging. I thank you as members for all of your pictures and articles for the newsletter. We need to be very proud of our award winning newsletter. Actually, I believe that there were 4 Canadian newsletters that received 100%.

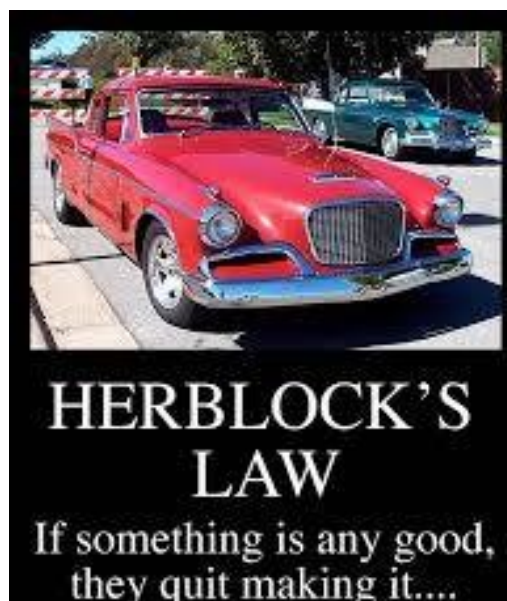

### Harry Barnes Award

- Harry Barnes was the founder of the Studebaker Drivers Club. This year, I was nominated by Pete Yuen and Larry Metz for this award. At the recent International Meet in Washington Pa. I was awarded the Harry Barnes Award. I am so thrilled to receive this for my contributions to our chapter, and to the Studebaker Drivers Club. It will be mailed to me.

## Tech Tip Peter Sant

### An expensive fix, but it works!

Our Studebakers are generally driven in the warm summer months and all of us have experienced the dreaded heat gauge climb. When our vehicles were new, there was not a problem but as our cars are 50 years old (or older), some deterioration of the cooling system is to be expected. Careful cleaning of the block to remove accumulated sludge is the number solution to overheating but the radiator itself is subject to corrosion and calcification. My Avanti exhibited some of overheating problems, but then Avanti cars are really bad for overheating. It is not the air getting into the radiator but there is very little room for the heated air to escape, consequently the car runs hot, especially if you have a radiator that needs servicing. When I took my Avanti out for the first time this year, the radiator leaked. Why, I don't know, but it did so I took it to Rapid Rad at Bayside (between Belleville and Trenton) and Brian, the owner, said that he had a newer type of radiator core, one with many more tubes to more than double the cooling capacity. Since I had to have a new radiator built, I told him to go ahead. It cost around \$800. which is a lot for frugal Studebaker folks but I can tell you that the cost was worth it. My temperature gauge now stays around 170 degrees and even with the A/C on full and the engine idling, it still remains where it should be. Brian said that since all Studebakers have a similar size radiator the cost would be about the same to rebuild a radiator for any Studebaker. All he needs is the tanks and he will do the rest. This is a good place to deal with. They have done all my cooling and A/C work for the past 25 years. [psant@cogeco.ca](mailto:psant@cogeco.ca)
